

CRYOTHERAPY

CRYOTHERAPY

USAGE:

- physiotherapy
- sports medicine
- SPA and wellness procedures
- aesthetic medicine

RESULTS OF CRYOTHERAPY:

- pain relief
- muscle tension relief
- swelling reduction
- shortened injury treatment period
- limited intake of analgesic and anti-inflammatory medications
- increased muscle strength
- increased scope of joint mobility
- increased tolerance of physical effort
- increased metabolic rate
- cellulite reduction, skin tightening

Cryotherapy (cryostimulation) is a procedure based on applying nitrogen vapour stream with temperature below -100°C on patient's skin for a short period of time, lasting between 1 and 3 minutes.

KRIOPOL R version 3

Mistral

ADVANTAGES OF THE DEVICE:

- The device has functions enabling people with hearing and vision impairments to operate this appliance (large digits – 40 mm, voice synthesis)
- Two additional operating modes have been implemented – pulsation 1 and pulsation 2, which significantly reduced nitrogen consumption.
- Operating parameters of the device can be adjusted to meet user requirements – possibility to perform individual setting.
- The device can be equipped with containers of the following capacity: 26, 35, 60 dm³.
